Assessment

Project Group Number 10 *feedback by Ananya Vishwanath*

Group Contract

- All questions are clearly answered (**Yes**/No) [*5 marks*]

Project Summary

- **Project title** is clearly stated (**Yes**/No) [*1 mark*]
- Clearly defines the **engineering problem** to be solved (Yes/**No**) [0/*1 mark*]
- Includes **Python libraries** / **machine learning model** to be used (**Yes**/**No**) [0.5/*1 mark*]
- Provides details about a **dataset** to use (**Yes**/No) [*1 mark*]
- Highlights **relevance to engineering** (**Yes**/**No**) [0.5/*1 mark*]

Feedback from TA

Engineering problem needs to give a higher-level picture AND a more in-depth view of the issue.
Why is the problem important? What is currently used to solve this problem? What are the downsides of the existing methodology?
Please be more descriptive for the machine learning model part for your upcoming deliverables. What exactly is forecasted?
What ML models are you thinking of using? Why are the ML models that you have chosen being considered for this problem?
If a final ML model is chosen, start considering the rationale as to why (what about it complements the problem at hand), and what metrics will be used to assess its performance
Good insight about dataset parameters planned.
There is room to explain more about how this can help the mitigation plans? Impact on human life, society etc

Total: 8/10
